

Expertise Engineered to Scale

AI-Accelerated Learning,
Knowledge, and Content

Brochure

www.platypai.one

THE CORE PHILOSOPHY

AI output is becoming the norm. Expert input is still scarce.

The learning industry is quickly adopting AI to generate content. However, this is coming at the cost of design quality, expert judgment, and preserving quality at scale.

PlatypAI works where that gap matters: designing AI workflows and products that capture expert perspective before production begins... and maintains it through production.

FROM AI-ONLY TO EXPERT-IN-THE-LOOP

METHODOLOGY	AI-only	Human-in-the-Loop	Expert-in-the-Loop
WORKFLOW DESIGN	Generates from prompts	Reviews output after generation	Architects the workflow before generation begins
DOMAIN LOGIC	Optimizes for speed	Catches visible errors	Embeds domain logic and quality rules natively
CONTEXT	Context depends on the prompt	Context depends on reviewer interpretation	Structures context via taxonomies and rubrics
QUALITY CONTROL	Quality varies by user	Improves selected drafts	Ensures consistent quality through expert audits
OUTCOME	Good for low-risk tasks	Useful for controlled content production	Creates repeatable, business-critical engines

CAPABILITIES OVERVIEW

Expertise Engineered to Scale

PlatypAI is a team of experienced learning experts who committed to adopting and adapting the GenAI wave to amplify and scale their capabilities. We are not a production house. We are a learning transformation accelerator.

Designed by experts. Accelerated by AI. Built for scale.

WHAT MAKES PLATYPAI DIFFERENT

- **Expert-in-the-loop architecture** led by experienced learning architects and instructional design consultants
- **Uncompromised quality** that combines human audits with iteratively refined agentic reviews
- **Source-grounded knowledge** that combines indexed memory banks with vector RAGs
- **Repeatable engines** that bring down cost and timelines with scale, while delivering consistent output

THE ARCHITECTURE

Expert-in-the-Loop is not a review step. It is the architecture.

We are a consulting-first team. We work with our clients to identify the business need and design custom solutions for them. You can see this in our service stack, starting from the bottom, all the way up to the output.

EXPERTISE STACK

The expert layer is not the only expert intervention. Our experts are involved at every level. Instead, this is the pivotal stage where our experts provide the level of input and value that cannot be replicated by standard AI workflows offered by production companies.

SERVICE OFFERINGS

Four kinds of AI systems. One operating discipline.

We can slice what we do in multiple ways. The core message though is that we design systems before products, we provide value before services.

01

Learning Systems

Convert expertise into structured learning.

OUTPUTS

- Curricula
- Assessments
- Simulations
- Storyboards

Teach

02

Knowledge Systems

Convert scattered information into usable intelligence.

OUTPUTS

- Knowledge hubs
- RAG systems
- Repositories
- Copilots

Organize

03

Workflow Systems

Convert repeatable effort into automated production.

OUTPUTS

- Content pipelines
- Review flows
- Digital learning package generators
- Automated QA loops

Automate

04

Application Prototypes

Convert business ideas into sophisticated AI product experiences.

OUTPUTS

- Dashboards
- AI tools
- Simulations
- Product pilots

Prototype

CASE STUDIES

What this looks like in practice

01

Enterprise Knowledge Transformation

AI-assisted extraction, restructuring, and tagging across enterprise documentation.

THE OUTCOME

80%

reduction in curriculum development time

Information security certification knowledge management and training

02

Sales Enablement AI Prototype

High-design AI product prototype with workflow logic, content intelligence, UX direction.

THE OUTCOME

4

weeks from idea to secure prototype

Investment management tech sales simulations with real-time coaching

03

Adaptive Leadership Simulation

Multi-stage scenario engine with scoring, feedback, and expert-calibrated outcomes.

THE OUTCOME

5K+

global learners standardised

School leadership and administration simulations and training

04

AI Content Production Engine

Repeatable AI workflows with expert review, templates, and multi-format output.

THE OUTCOME

8x

throughput vs. manual drafting

Legal intellectual property content for books, training, and digital resources

05

Custom Knowledge Workflow Tooling

Structured knowledge workflows with AI-assisted interfaces for reuse and retrieval.

THE OUTCOME

60%

less information retrieval time

Memory banks and RAGs capturing Fintech enterprise knowledge

WORKFLOW METHODOLOGY

Two loops: expert-designed first, then automation with expert audits.

PlatypAI does not jump from source material to generated output. We first design the production system. Then we run it at scale with targeted audits, refinements, and escalation points.

- **Loop 1:** Expert designed, AI facilitated
- **Handoff to Loop 2** at the end of Loop 1
- **Loop 2:** AI automated, Expert audited

TRUST AND SECURITY

Trust is designed into the workflow, not patched onto the output.

Our core team's careers have been built on the trust of the credibility and value they represent. We have engineered our workflows to represent this same credibility and value, baking it into our design, workflows, and processes.

01  Confidentiality-aware agentic workflows	AS SECURE AND OFFLINE AS REQUIRED Applications and workflows can switch between online, cloud-secure, and offline modes based on the sensitivity of the material.	WHY IT MATTERS Sensitive projects do not need to use the same AI path as low-risk content.
02  Bespoke skills and expert workflow library	APPROVALS BECOME STANDARDS Reusable workflow patterns capture learning architecture, assessment design, knowledge structuring, content QA, simulation logic, and business output rules.	WHY IT MATTERS Expert thinking becomes repeatable instead of remaining trapped in individual reviewers.
03  RAG + Context Management	MEMORY THAT TRULY PERSISTS Source-grounded RAG combined with curated context packs, wiki-style knowledge maps, reusable examples, and task-specific memory structures.	WHY IT MATTERS The system retrieves what matters and carries forward the right context without flooding the model.
04  Layered quality audits	LAYERS AND ITERATIONS OF CHECKS Outputs pass through sample checks, rubric checks, source checks, bias and fairness checks, format checks, and expert escalation where needed.	WHY IT MATTERS Quality is stabilised across batches, not judged only at the end.
05  Iterative production intelligence	EVOLUTION BUILT INTO DESIGN Each production cycle improves prompts, agents, templates, checklists, and source structures.	WHY IT MATTERS The workflow gets stronger as volume increases.

We spend time and effort upfront to ensure that our scale and speed are stable and dependable.

ENGAGEMENT MODEL

You do not need to arrive with a perfect brief.

Often, the real value starts before the problem is fully articulated. PlatypAI helps clients diagnose where AI can genuinely improve learning, knowledge, content, workflow, or product experience — and where it should not be forced.

EXPERTISE → WORKFLOW → INTELLIGENCE → OUTPUT

AI is a great vehicle to speed and scale things up, when you have an expert driving. PlatypAI can be your knowledge/learning partner, with solutions mapped to your business need.
